

Cusbo Help Center

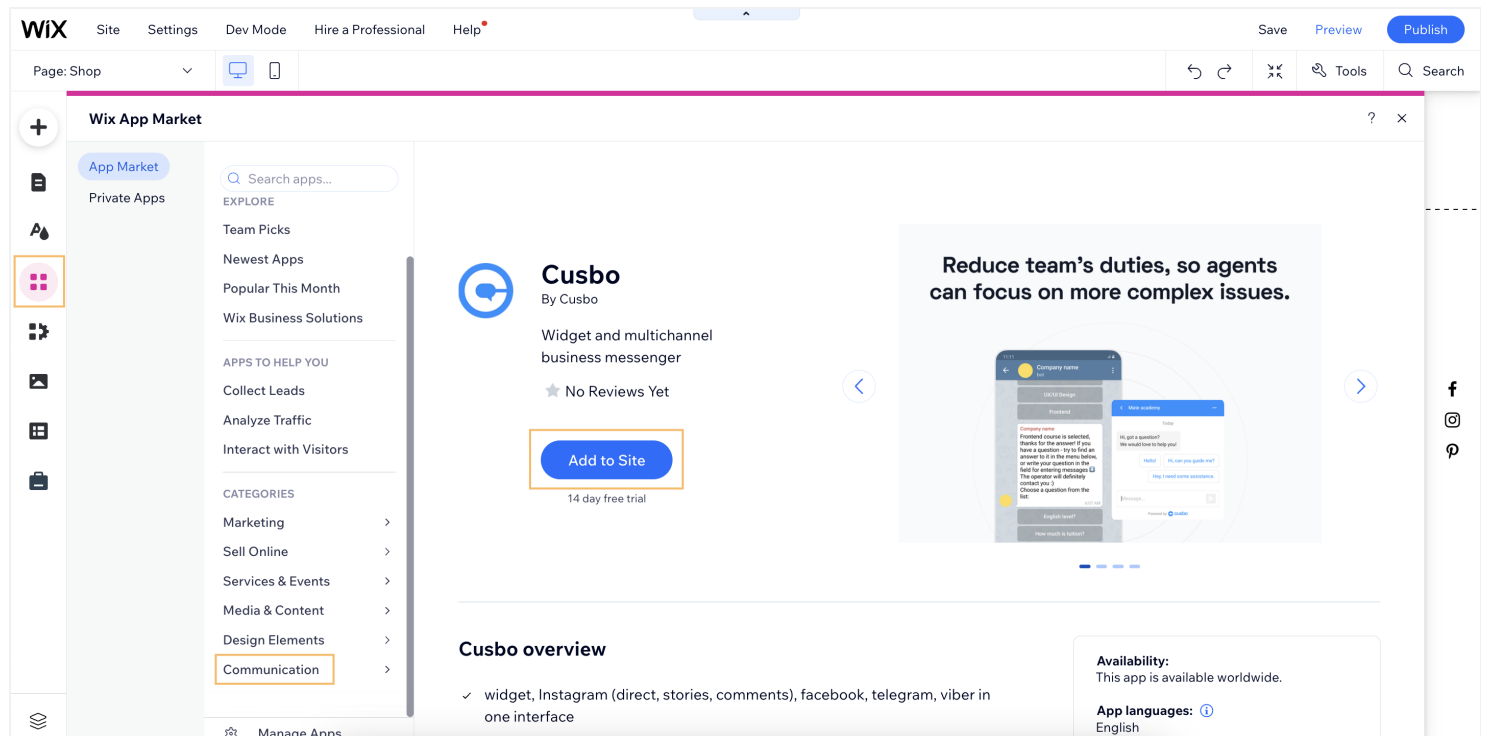

How to install Cusbo on Wix

Welcome! Here you can find three methods with a few simple steps to install our widget on your website.

Method 1: Install via plugin from the Wix app market

This method is available for free Wix users

1. Access the Wix panel and go to **Edit site** section. Click on **Add Apps** button and search for “Cusbo”, or select the **Communication** category, find **Cusbo**, and click on **Add to Site**.

The screenshot shows the Wix App Market interface. At the top, there are navigation links for Site, Settings, Dev Mode, Hire a Professional, and Help. On the right, there are buttons for Save, Preview, and Publish. Below the navigation, there is a search bar and a 'Tools' button. The main content area is titled 'Wix App Market' and features a sidebar with various app categories. The 'Communication' category is highlighted. The main area displays the 'Cusbo' app listing, which includes a search bar, a list of app categories, and a detailed view of the Cusbo app. The Cusbo app is described as a 'Widget and multichannel business messenger' with a '14 day free trial' and an 'Add to Site' button. A large banner image shows a mobile interface with the text 'Reduce team's duties, so agents can focus on more complex issues.' Below the app listing, there is a 'Cusbo overview' section with a checkmark and a list of supported platforms: 'widget, Instagram (direct, stories, comments), facebook, telegram, viber in one interface'. To the right, there is an 'Availability' section stating 'This app is available worldwide.' and an 'App languages' section listing 'English'.

2. Click on **Agree & Add**.

Adding Cusbo will allow it to:

- **Manage embedded scripts**

- **Read basic site and business info**

Cancel

Agree & Add

By clicking Add to Site you acknowledge that you are installing a third-party app that is independent from Wix. Wix has not reviewed or approved, nor is it otherwise related to, this app and is not responsible for this app's content, functionality, security, performance and/or privacy policy.

3. The widget is installed, and now you just need to connect it your Cusbo account by clicking on **Go to Dashboard**.

Wix AppMarket

You Added Cusbo

Now, head over to the Dashboard to get set up.

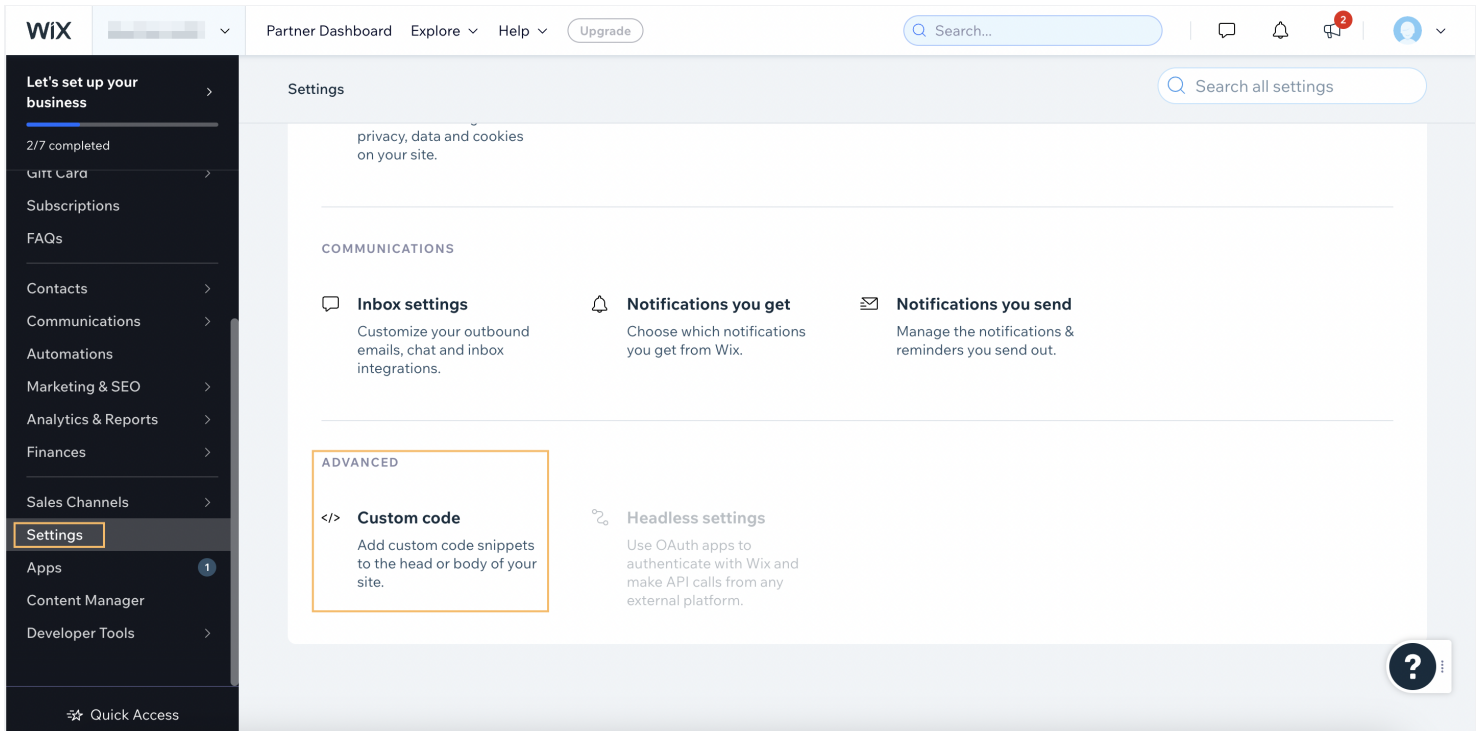

Go to Dashboard

You will be redirected to the settings of the created WIX-integrated widget if you are logged in with **Cusbo**, otherwise, you must log in (or sign up first if you haven't already).

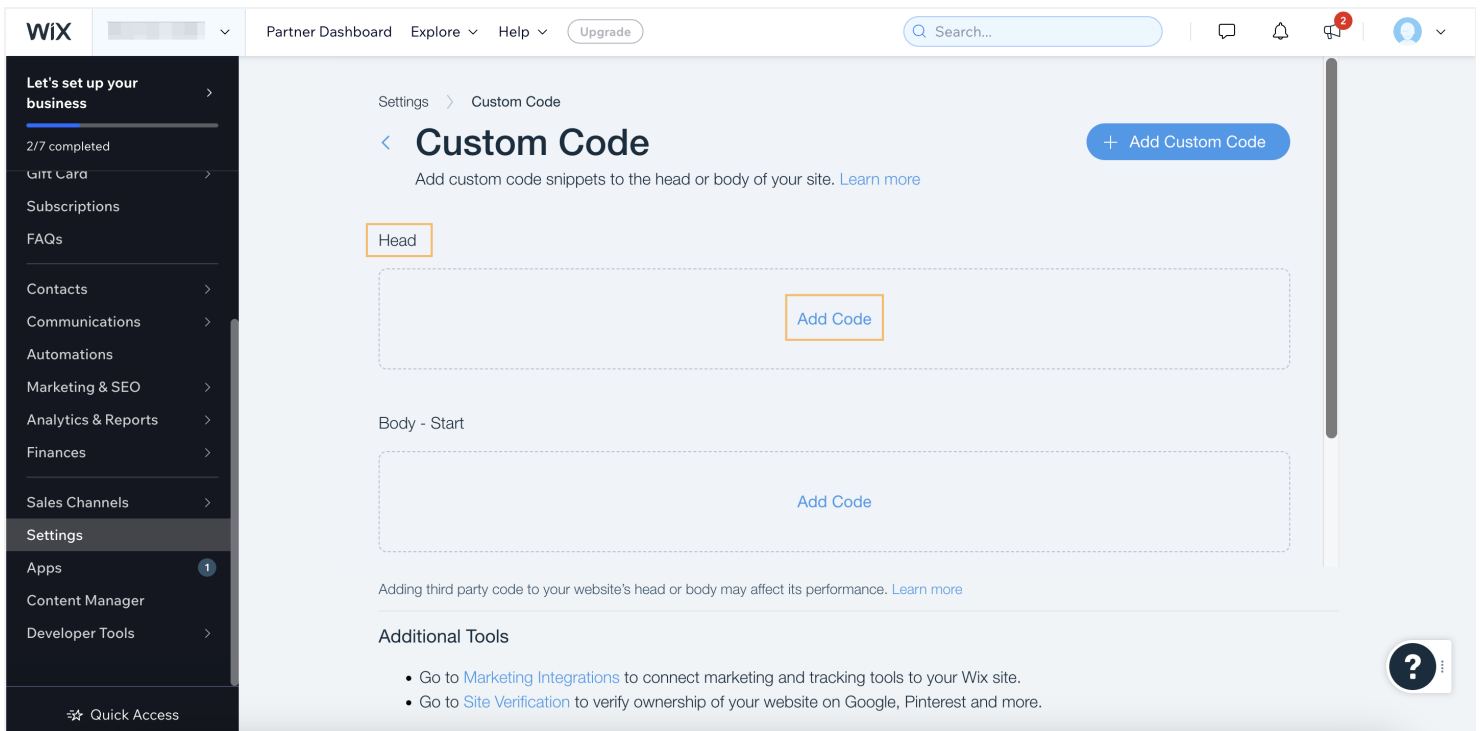

Method 2: Embed the Cusbo code on your Wix panel

Please note: This method will work for you if you have a premium subscription on Wix

1. Access the Wix panel and click on **Settings**. Scroll down to the bottom of the page until you find the **Advanced** section and then click on **Custom code**.

2. Click on **Add Code** in the **Head** section.

3. Paste the Cusbo widget installation script in the field **Paste the code snippet here** and insert a **Name** for future identification of the custom code (e.g. Cusbo).

Select the **All pages** option in the **Add Code to Pages** field and select **Load code once** from the dropdown list. Also, select **Head** in the **Place Code** field. Click on **Apply** to finish the installation.

Add Custom Code

Code Settings

Code Type

Paste the code snippet here:

```
<script id="cusbo-widget" src="https://stage.cusbo.tech/widget/app.js" slug=" " async></script>
```

Name:

Cusbo

Add Code to Pages:

All pages

Load code once

Choose specific pages

Place Code in:

Head

Cancel

Apply

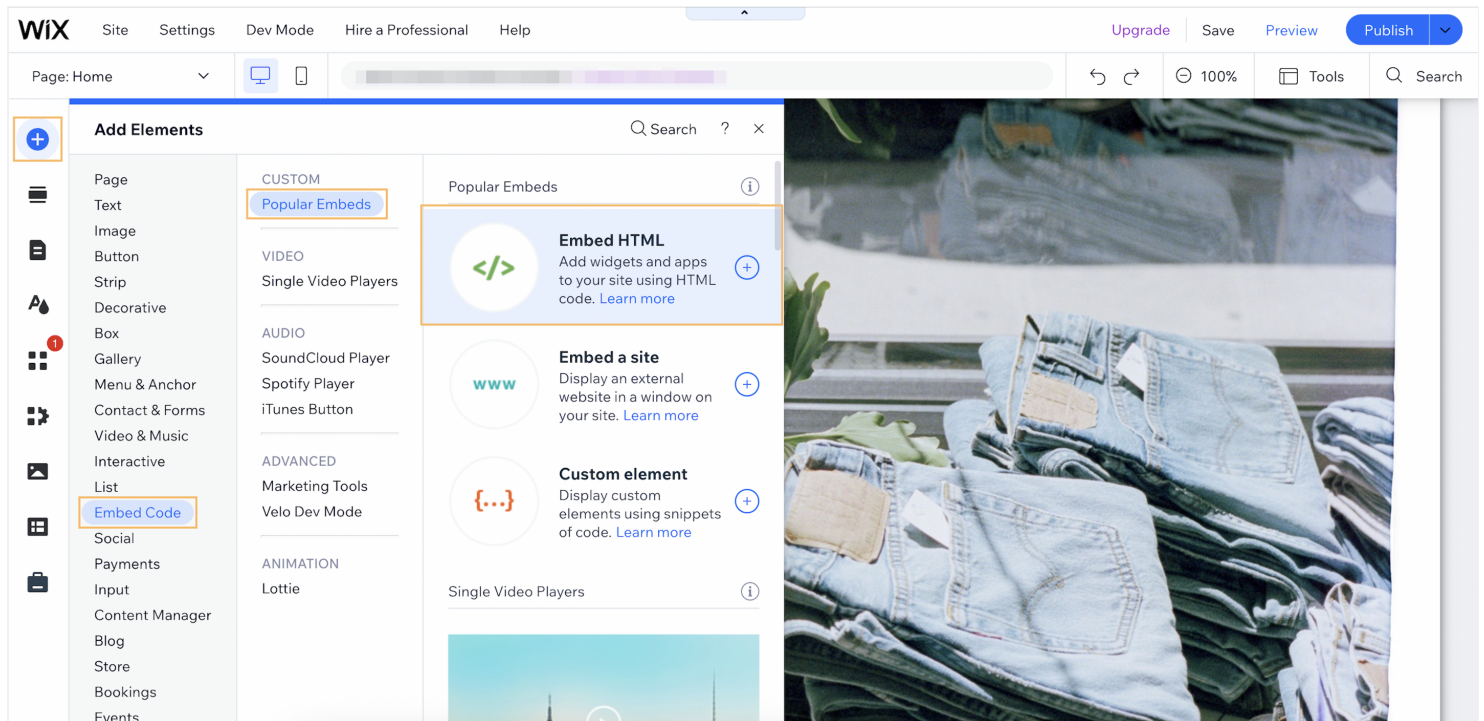

Adding third party code to your website's head or body may affect its performance. [Learn more](#)

4. Click on the **Publish** button in the top-right corner of the screen to finish the installation.

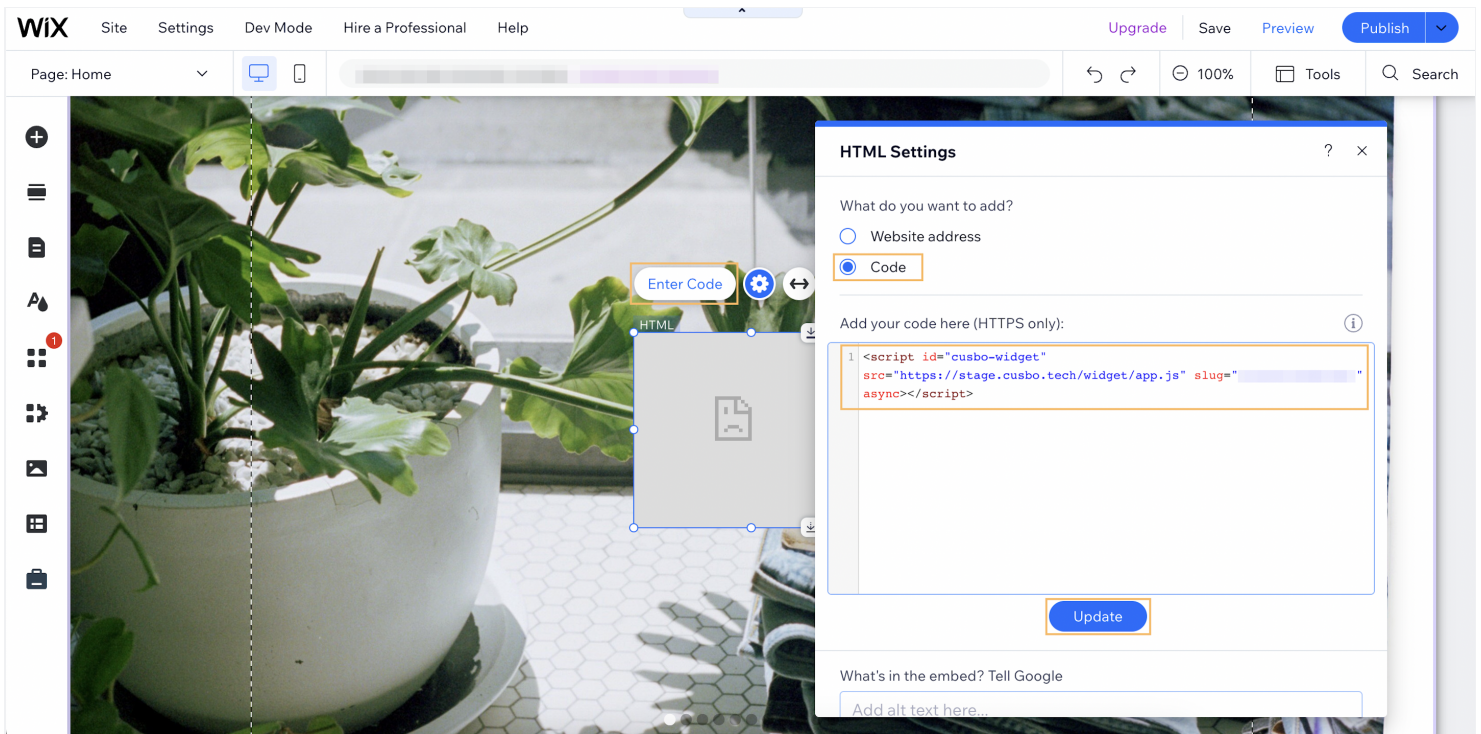

That's it! You're done!

Method 3: Embed Cusbo HTML code on an HTML box

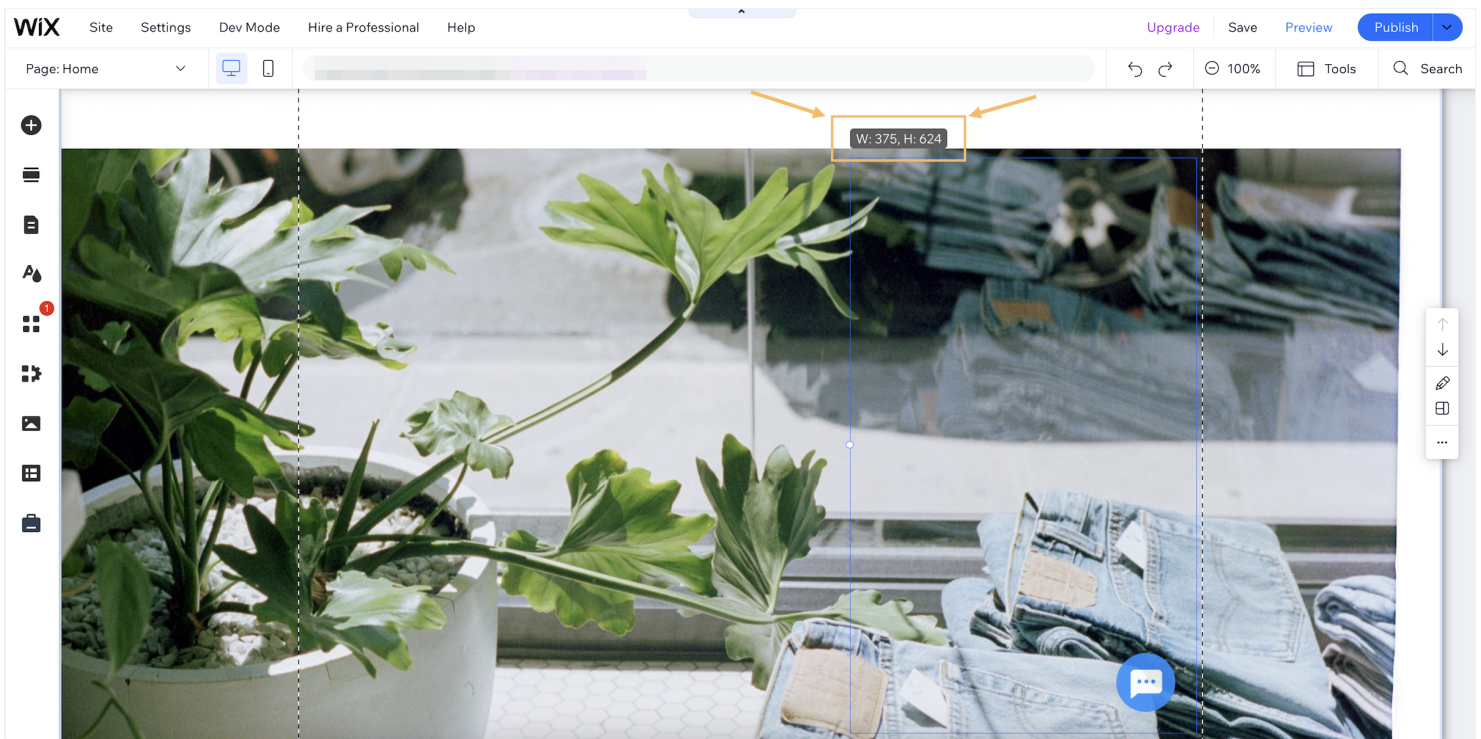

1. Access the Wix panel and go to the **Edit site** section. Click on **Add Elements** button and go to **Embed Code > Popular Embeds > Embed HTML**.

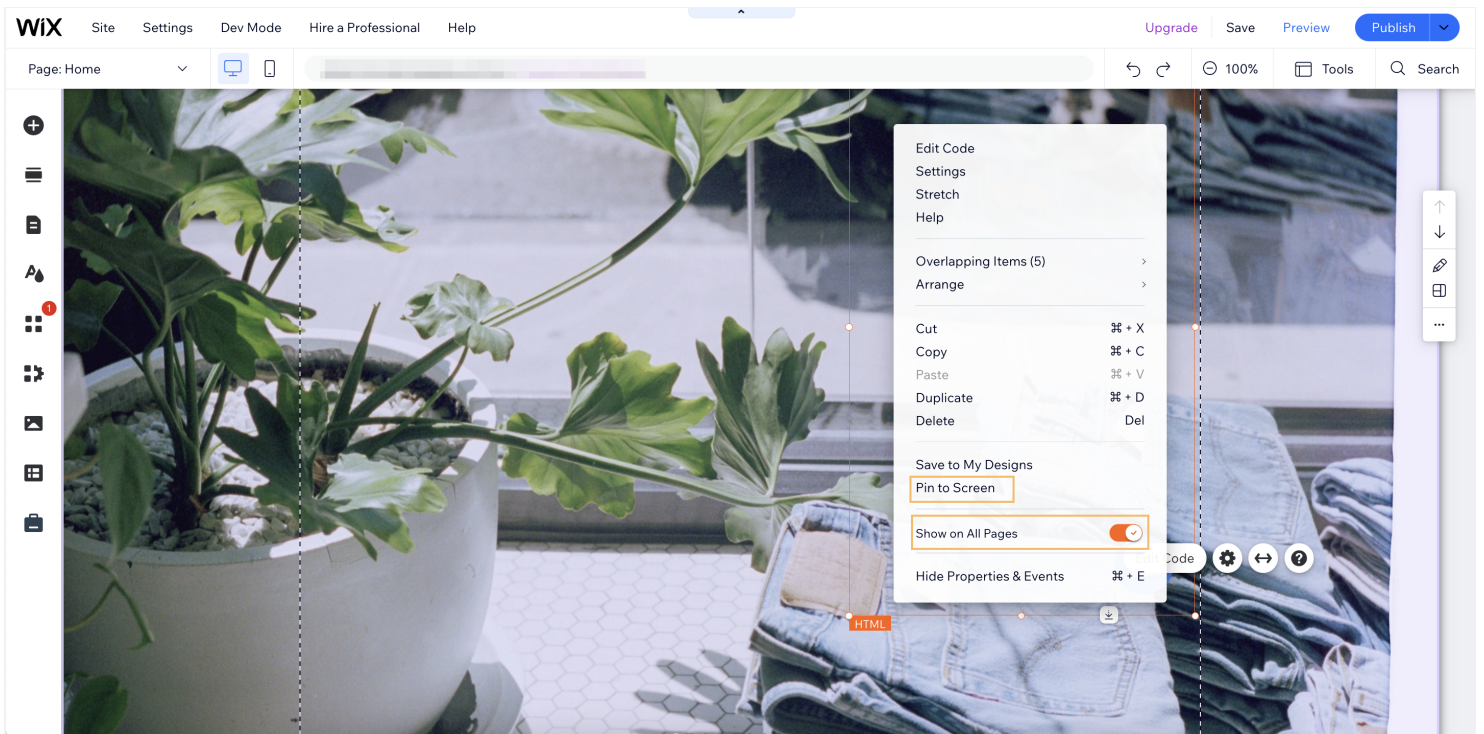

2. Click on **Enter code**, select the option **Code**, and paste the **Cusbo installation script** in the field **Add your code here (HTTPS only)**. After that, click on **Update**.

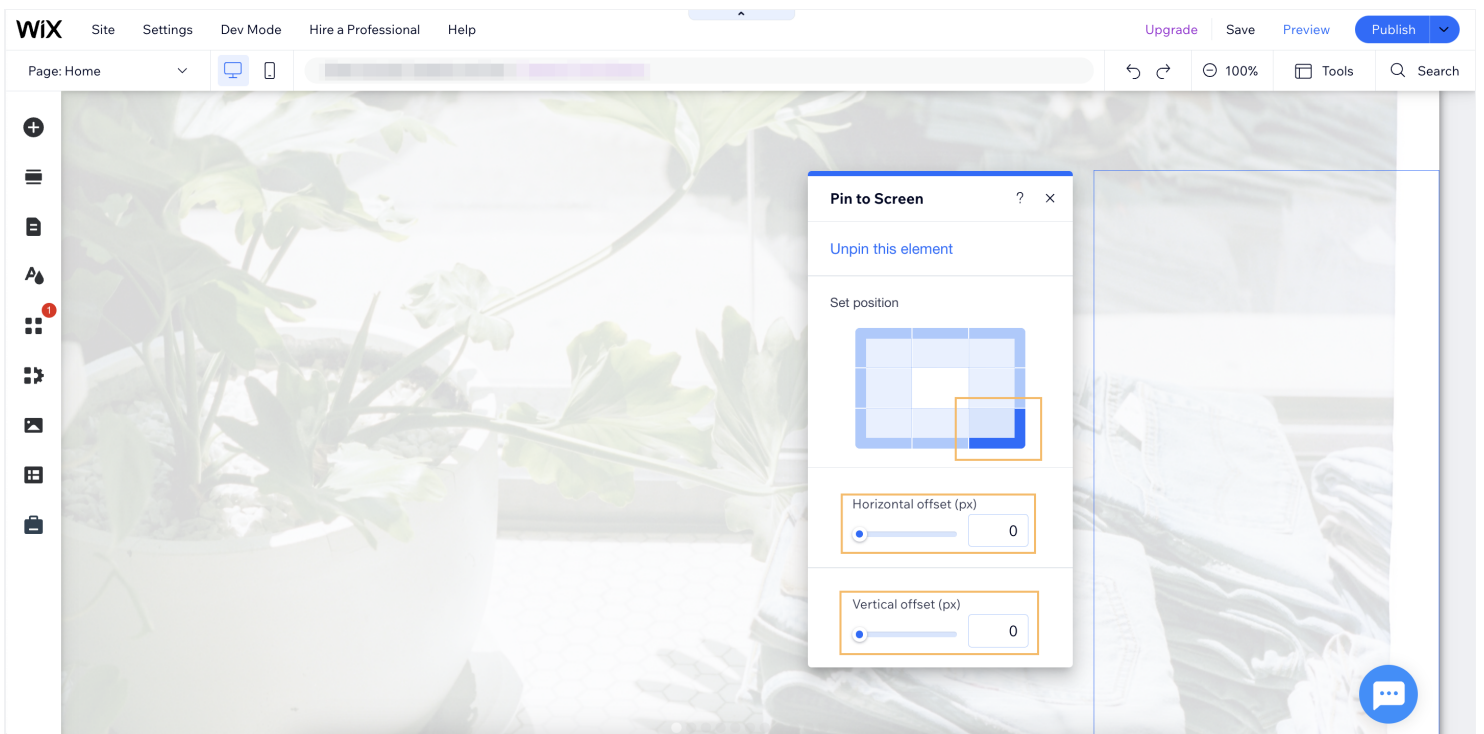

- Next, you need to change the size of the widget. Drag the borders of the widget, you should set the size to 375×624.

- Right-click** on the widget to open the options menu. Enable the option **Show on all pages** and then click on **Pin to Screen**.

5. Choose the chat position and set both Horizontal offset and Vertical offset to 0.

6. Click on the **Publish** button in the upper right corner of the page and that's it!

How to set up Twilio Webhook URL

Welcome! Here you can find a quick guide on how to set up a Twilio Webhook URL to complete the preparation of your WhatsApp channel for use

Please note: that you must be [logged](#) into a Twilio paid account as it is required to submit a WhatsApp Sender

Step 1: Open sender settings

To get to the sender's webhook settings, follow this path: your Twilio account dashboard > Messaging > Senders > WhatsApp senders > [Edit Sender] button

The screenshot shows the Twilio console interface. The left sidebar contains a navigation menu with the following items: Develop, Monitor, Conversations, Phone Numbers, Messaging (highlighted with a red box and '1'), Overview, Try it out, Services, Senders (highlighted with a red box and '2'), Short codes, WhatsApp senders (highlighted with a red box and '3'), WhatsApp templates, Content Editor, and Docs and Support. The main content area displays an 'Optional next step' notification, a congratulatory message, and a list of requirements for Meta Business Verification. Below this, there are two input fields for 'Whatsapp Business Account ID' and 'Meta Business Manager ID'. At the bottom, a table lists sender details: WhatsApp number, Sender status (Online), Business display name (Cusbo), and Actions (Edit Sender, highlighted with a red box and '4').

Step 2: Add Twilio Webhook URL to the sender

Add the Twilio Webhook URL to **each** of the following fields noted in the screenshot below

Note: you can leave the "Twilio Webhook URL" field blank, as it is **optional**

The screenshot shows the 'Endpoint configuration' page in the Twilio console. The page title is 'Endpoint configuration' and it includes a sub-header: 'Configure WhatsApp to work with your application. All sent and received messages will hit these endpoints.' Below this, there are two radio buttons for configuration: 'Use a Messaging Service (recommended)' and 'Use webhooks'. The 'Use webhooks' option is selected. There are three main sections for configuration, each with a text input field and a dropdown menu for the 'Webhook method':

- Webhook URL for incoming messages - Optional:** The input field contains 'https://app-serverless.cusbo.tech/cusbo-messengers/wt'. The dropdown menu is set to 'HTTP Post'. A red arrow points to this section with the label 'Required'.
- Fallback URL for incoming messages - Optional:** The input field contains 'https://example.com/fallback'. The dropdown menu is set to 'HTTP Post'. A green arrow points to this section with the label 'Optional'.
- Status callback URL - Optional:** The input field contains 'https://app-serverless.cusbo.tech/cusbo-messengers/wt'. The dropdown menu is set to 'HTTP Post'. A red arrow points to this section with the label 'Required'.

Additional text includes: 'You don't have any Messaging Services. Create a Messaging Service.' and 'For when the incoming messages URL cannot be reached or there is a runtime exception'. A note at the bottom states 'Only HTTP Post method available'.

Don't forget to confirm the update by clicking on the **[Update WhatsApp Sender]** button at the end of the page!

The screenshot shows the 'Business profile' page in the Twilio console. The page title is 'Business profile' and it includes a sub-header: 'This information will be shown to WhatsApp users when they are interacting with your business. Twilio recommends adding this information because it has shown to increase message recipients' trust of your senders and increase engagement.' Below this, there are several optional fields for business information:

- Profile photo - Optional:** A 'Select File' button.
- Business address - Optional:** An input field with the placeholder 'Address'.
- Business website - Optional:** An input field with the placeholder 'https://www.example.com'.
- Additional business website - Optional:** An input field with the placeholder 'https://www.example.com'.
- Business email - Optional:** An input field with the placeholder 'Email'.
- Vertical - Optional:** A dropdown menu with the option 'Select a Vertical'.
- Business description (256 characters) - Optional:** A text area with the placeholder 'Description' and a note 'Limit to 256 characters - currently 0'.
- Profile about:** A text area with the placeholder 'Hey there! I am using WhatsApp.' and a note 'Limit to 139 characters - currently 31'.

At the bottom of the page, there are three buttons: 'Update WhatsApp Sender' (highlighted with a red arrow), 'Cancel', and 'Delete sender'.

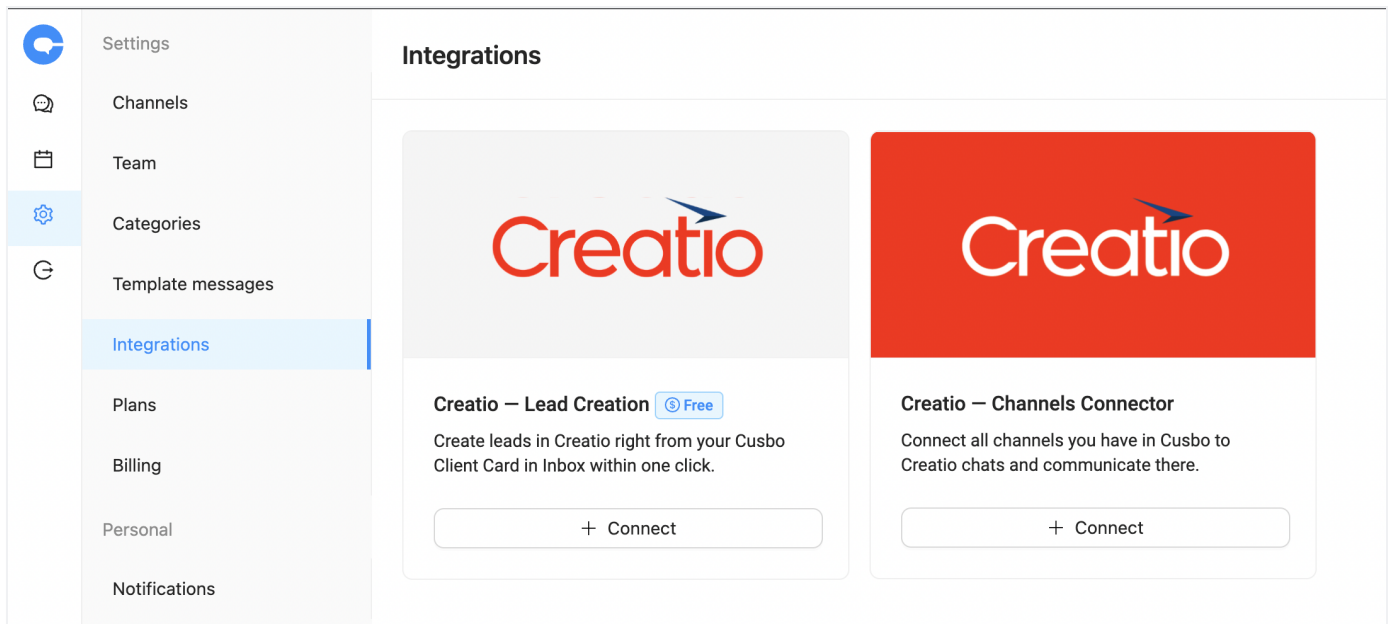

That's it! Enjoy all the benefits of WhatsApp together with **Cusbo!**

Additional channels for Creatio chats user guide

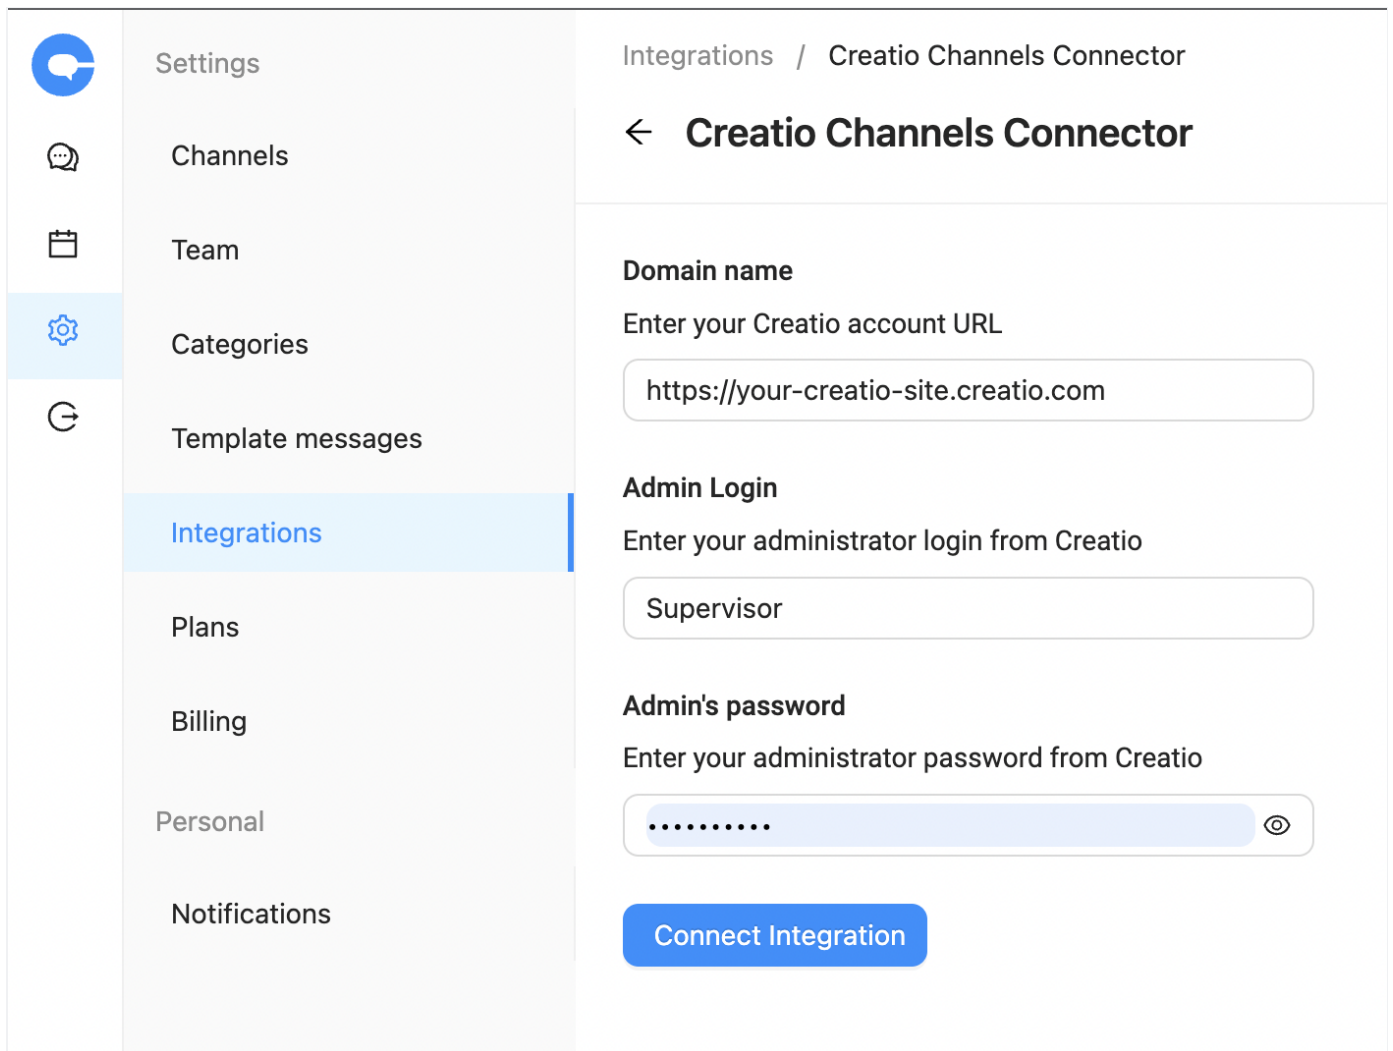

Init configuration

Before configuring Additional channels for Creatio chats, make sure you have CusboApiToken for your integration (provided by [Cusbo support](#)) and installed the Cusbo Messengers package.

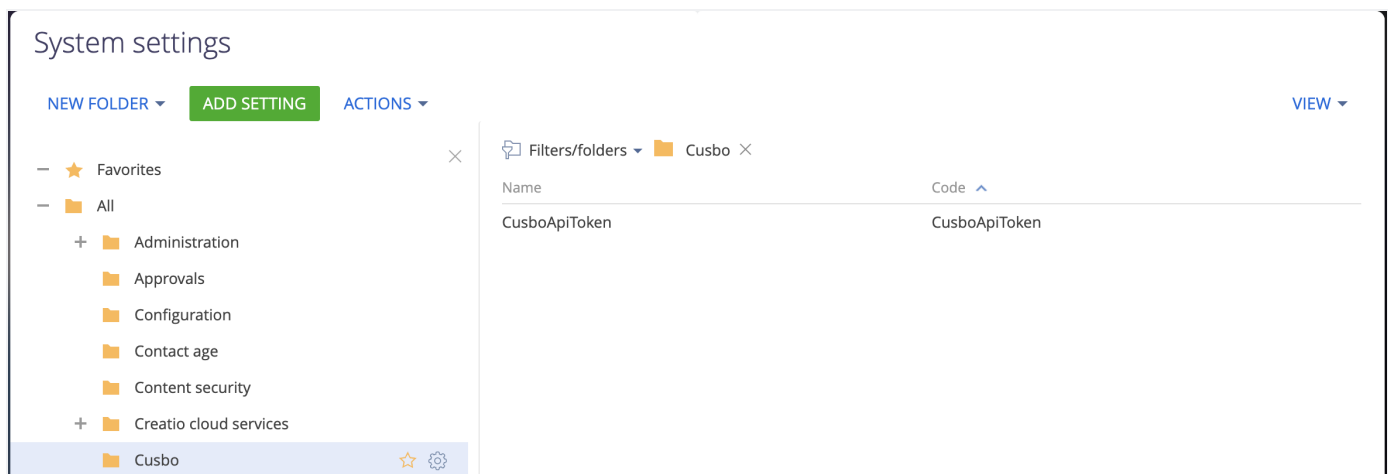

1. Create a Creatio user for the integration. To do this, in Creatio go to *Settings* → *System users* → *New* → *Company employee* → Fill required fields. Make sure this user can access Creatio and has read and write permissions for *OmniChat* and *Contact* objects (or has admin rights).
2. Login into [Cusbo](#) and navigate to *Settings* → *Integrations* → *Creatio - Channels Connector* → *Connect*:

3. Enter your Creatio domain and the credentials of the previously created user:

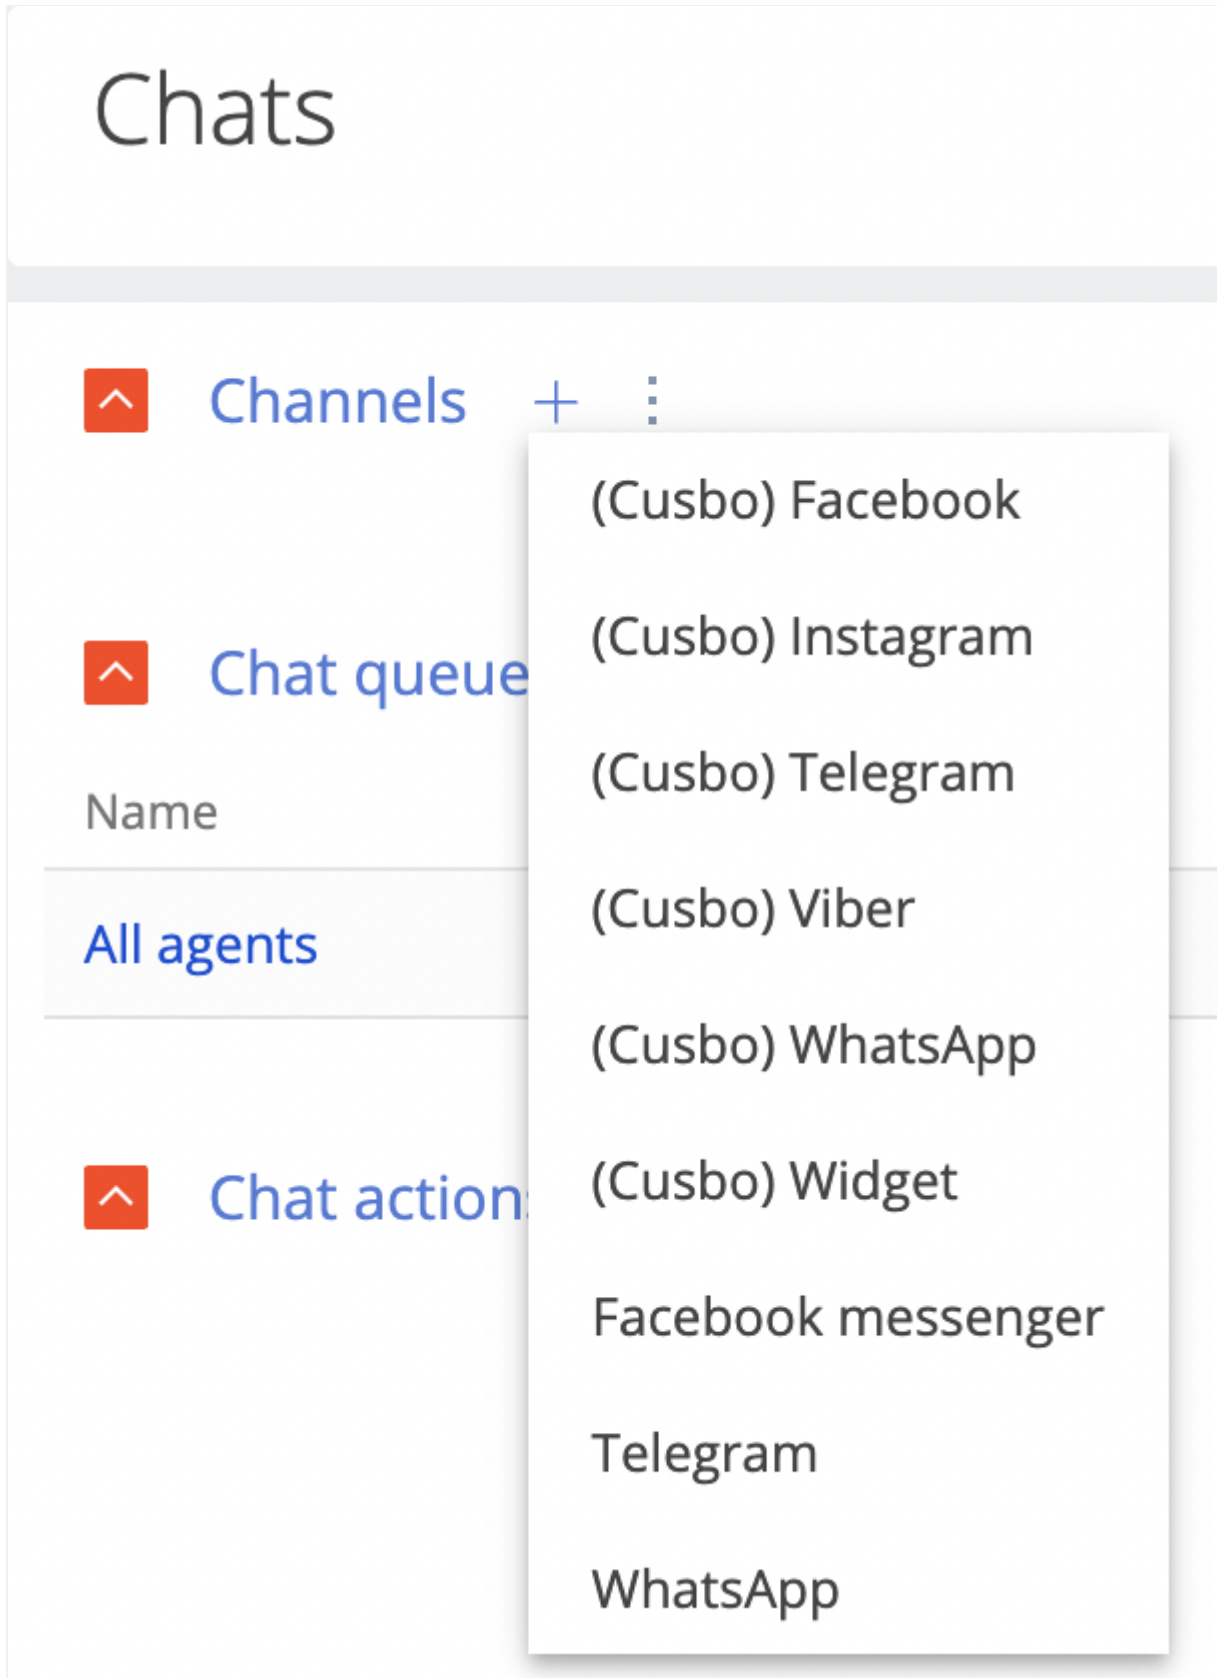

4. Press *Connect Integration*. If you haven't yet installed Cusbo Messengers to the domain you've filled in or the given credentials are not valid, you will see an error message.
5. Return to Creatio and navigate to *System Settings* → Find *CusboApiToken* (located in *Cusbo* folder) → Set your API token value:

6. Now you can add your Cusbo channels to Creatio.

Adding or removing Cusbo channels

1. After the successful installation of Cusbo Messengers, in the *Chat Settings*, new channel providers can be chosen:

2. Choose one of provided Cusbo providers. You will be redirected to the page with all your channels for the chosen provider that can be added to Creatio:

Connect Cusbo channels

Select Cusbo channels you want to connect

Connected ▾	Provider	Name	ChatQueue	+ ⋮
1 <input checked="" type="checkbox"/>	WIDGET	My Connected Widget	All agents	
2 <input checked="" type="checkbox"/>	WIDGET	Another Connected Widget	All agents	
3 <input type="checkbox"/>	WIDGET	Super Widget	All agents	
4 <input type="checkbox"/>	WIDGET	New Widget	All agents	

Cancel changes Apply changes

If the *CusboApiToken* value is incorrect or you haven't added Creatio integration on Cusbo side, you will see a corresponding modal window with action that should be taken instead of this page. This modal has OK button that would redirect you to the page where the action should be taken.

3. Mark checkboxes for any channels that you want to add to Creatio and press *Apply changes button*. Additionally, you can change Chat Queue for any existing (or those to be added) channel.
4. If you want to remove (or make inactive) any already added channel, just uncheck the checkbox and press *Apply changes button*.
5. You will see a modal window with a success message. The OK button would redirect you to the *Chat Settings* page.
6. You should see newly added channels marked as active on this page. Channels removal would completely remove it from Creatio if it hasn't got any messages or mark the channel as inactive if there are any existing chats.
7. Now you can receive any messages to the added channels on the Creatio side. As soon as any user would write to the channel chat (or any operator would write to the existing chat on the Cusbo side), it would appear in the *Chats* section.

Notes

- Attachments are not yet supported in the Creatio interface for Cusbo channels and won't be sent or received - this feature is in progress and will be available soon;
- User profile photo won't be saved in Creatio contact when a new user sends a message to added channels - this feature is in progress and will be available soon.
